A Commercial Focus

Figure 01 is an autonomous general-purpose humanoid robot developed by Figure AI. Unlike research-oriented projects, Figure 01 is explicitly designed for commercial deployment from day one, targeting industries with severe labor shortages such as manufacturing, shipping, logistics, and retail.

Form Factor and Capabilities

Standing at a human scale, Figure 01 is designed to operate safely alongside humans and seamlessly integrate into existing human environments. It features highly dexterous hands for complex manipulation tasks and can learn new behaviors by observing human demonstrations.

OpenAI Integration

A significant milestone for Figure 01 is its integration with OpenAI's advanced visual-language models. This allows the robot to have full conversations with humans, understand context, visually identify objects in its surroundings, and reason about its tasks in real-time. It translates high-level verbal commands into complex physical actions.

Future Outlook

Figure AI has established partnerships with major automotive manufacturers like BMW to deploy these robots in real-world manufacturing plants, marking a major step toward practical, widespread humanoid robot adoption.
